

### Instruction sheet 1:

Hello, thank you for volunteering to participate in our study. Please be aware, that we have a competitive setup. We will be evaluating the performance of all the pairs, and in the end, we would give a bonus reward to the pair that completes each trial with best results (goal-reaching within the time-limit and most accurately). You are not allowed to communicate with your partner verbally or through facial or other interaction methods. Just look at the screen to co-ordinate your actions with the partner's. The experiment will go as follows.

#### Part-1:

##### Symmetric goal-information allocation

The green rectangle is the goal. You will be informed by the instructor which side of the table you push. Your partner will push the other side. You have a time limit of 10 seconds to reach the goal. You will do each scene 10 times. For each time, start only when the cue to start is given and stop as soon as the cue to stop is given. Your actions after the stop cue will not be recorded.
